

Serial No.: 10/672,439

Attorney Docket No.: 2003P08209US01

IN THE CLAIMS:

This listing of the claims will replace all prior versions and listings of the claims in the application:

1. (Currently Amended) A telecommunications ~~system~~ device, comprising:
a positioning controller adapted to determine positioning information for ~~[[said]]~~
~~an associated~~ telecommunications device; and
a wireless communications controller adapted to receive said positioning
information from said positioning controller and cause said positioning information to be
transmitted to an associated administration device when said ~~associated~~
telecommunications device is determined to be ~~[[out]]~~ outside of a predetermined
location and wherein said administration device is configured to maintain one or more
availability rules associated with a user of said ~~associated~~ telecommunications device
based on ~~the position and speed over a predetermined period of the associated~~
~~telecommunications device with respect to the predetermined location~~ whether it is
~~determined to be in the predetermined location.~~
2. (Currently Amended) A telecommunications ~~system~~ device as recited in
claim 9, wherein said positioning controller receives Global Positioning System (GPS)
signals to determine said positioning information.
3. (Currently Amended) A telecommunications ~~system~~ device as recited in
claim 2, wherein said wireless communications controller is a cellular telephone
controller.
4. (Currently Amended) A telecommunications ~~system~~ device as recited in
claim 2, wherein said wireless communications controller is a personal communications
service (PCS) controller.

Serial No.: 10/672,439

Attorney Docket No.: 2003P08209US01

5. (Currently Amended) A telecommunications ~~system~~ device as recited in claim 1, wherein said positioning information is transmitted if said telecommunications device is determined to be ~~[[out]]~~ outside of said predetermined location at a particular time or date.

6. (Currently Amended) A telecommunications ~~system~~ device as recited in claim 1, wherein said positioning controller is adapted to receive predetermined location information via said wireless communications controller.

7. (Currently Amended) A telecommunications system, comprising:
a wireless device including a positioning controller and a communications controller; and

an ~~administration~~ administrative device for receiving alerts from said wireless communication device via said communications controller when said positioning controller determines that said wireless device is outside a predetermined location and wherein said administration device is configured to maintain one or more availability rules associated with a user of said telecommunications ~~wireless~~ device based on the position and speed over a predetermined period of the wireless device with respect to the predetermined location ~~whether it is determined to be in the predetermined location.~~

8. (Original) A telecommunications system in accordance with claim 7, wherein said positioning controller receives global positioning network signals for determining a position of said wireless communications device.

9. (Original) A telecommunications system in accordance with claim 8, wherein said communications controller comprises a cellular network controller for transmitting on a cellular telephone network to said ~~administration~~ administrative device.

Serial No.: 10/672,439

Attorney Docket No.: 2003P08209US01

10. (Currently Amended) A telecommunications system in accordance with claim 9, wherein said ~~administration~~ administrative device is adapted to display location information when said wireless device is determined to be outside said predetermined location.

11. (Previously Presented) A telecommunications system in accordance with claim 10, wherein said predetermined location is associated with one or more of a geographic range, time-of-day range, or date range.

12. (Currently Amended) A telecommunications method, comprising:
affixing a wireless device to a predetermined object;
programming said wireless device to be in a predetermined location; and
transmitting one or more alerting signals to an ~~administration~~ administrative device when said wireless device is determined to be outside said predetermined location and wherein said ~~administration~~ device is configured to maintain one or more availability rules associated with a user of said telecommunications ~~wireless~~ device based on the position and speed over a predetermined period of the wireless device with respect to the predetermined location ~~whether it is determined to be in the predetermined location.~~

13. (Currently Amended) A telecommunications method in accordance with claim 12, wherein said ~~administration~~ administrative device comprises a telephony device.

14. (Original) A telecommunications method in accordance with claim 12, wherein said one or more alerting signals comprise one or more e-mail signals.

Serial No.: 10/672,439

Attorney Docket No.: 2003P08209US01

15. (Original) A telecommunications method in accordance with claim 12, wherein said one or more alerting signals comprise one or more text messaging signals.

16. (Previously Presented) A telecommunications method in accordance with claim 12, wherein said predetermined location is associated with at least one of geographic range, time-of-day range, or date range.

17. (Currently Amended) A ~~system computer~~, comprising:
a graphical user interface for displaying one or more predetermined locations and allowing a user to select said one or more predetermined locations; and
a controller for programming one or more predetermined locations into a wireless communication device, said wireless communication device including a positioning controller for receiving positioning signals, and a wireless interface for transmitting device positions to an ~~administration~~ administrative device and alerting said administrative device when said wireless communication device is outside said one or more predetermined locations and wherein said administration device is configured to maintain one or more availability rules associated with a user of said telecommunications device based on the position and speed over a predetermined period of the wireless communication device with respect to the predetermined location ~~whether it is determined to be in the predetermined location.~~

18. (Currently Amended) A ~~system computer~~ in accordance with claim 17, wherein said one or more predetermined location are associated with at least one of geographic range, time-of-day range, or date range

19. (Currently Amended) A ~~system computer~~ in accordance with claim 18, wherein said ~~administration~~ administrative device comprises one or more hardware or software modules of said computer.
